SENTINEL CAD

Computer Aided Dispatch System

Sentinel CAD

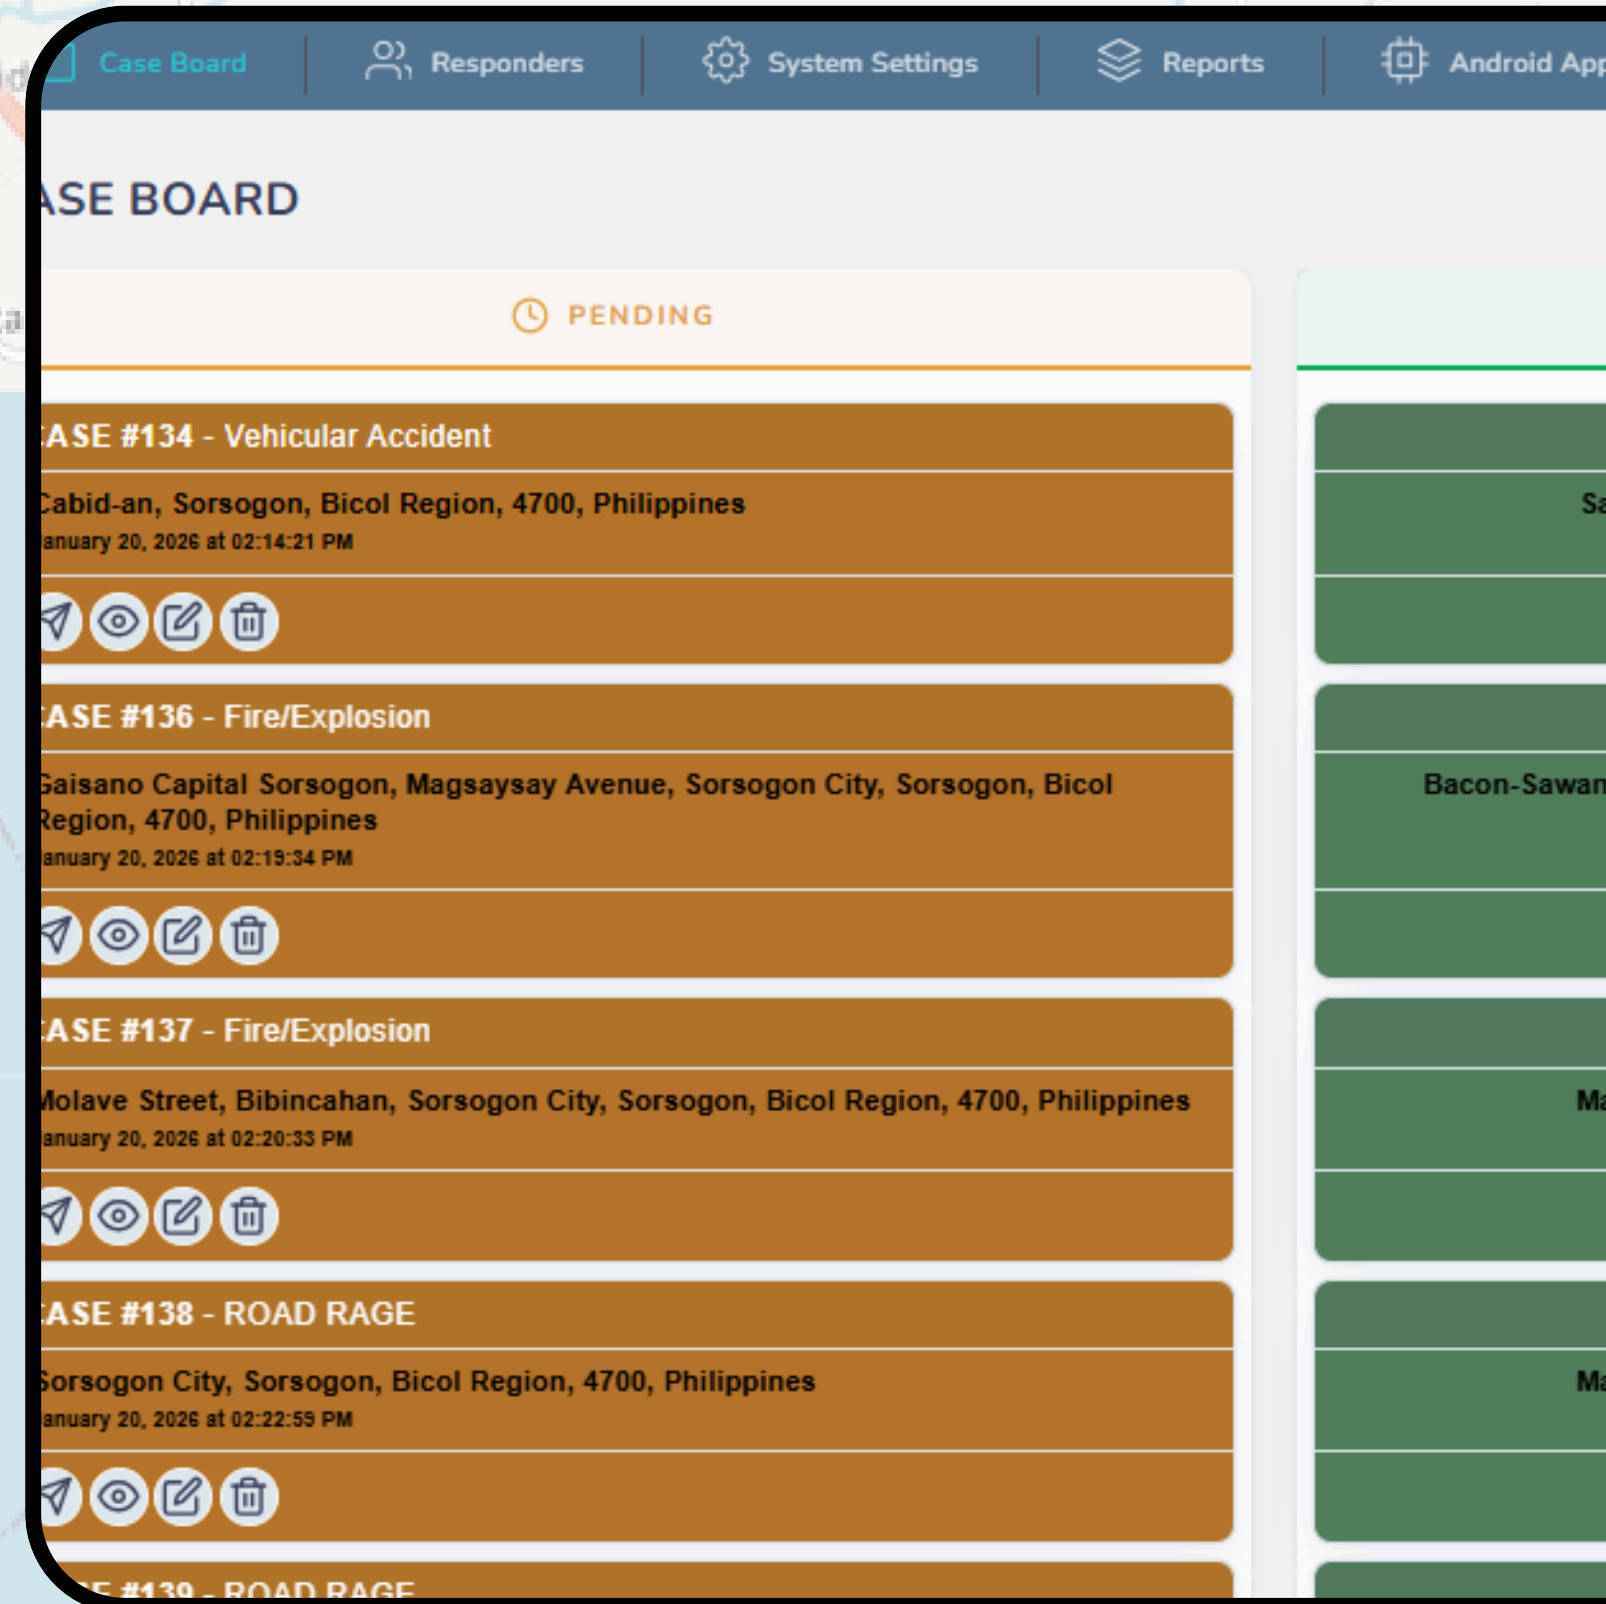

Stingray

System Overview

SENTINEL CAD

an **integrated emergency incident management platform** developed for LGUs.

It supports the **full emergency response lifecycle**—from initial incident reporting to dispatch coordination, field response execution, and final reporting.

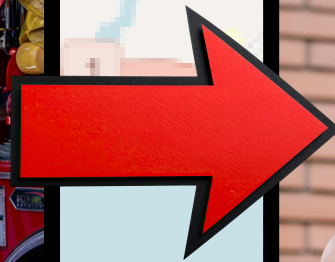

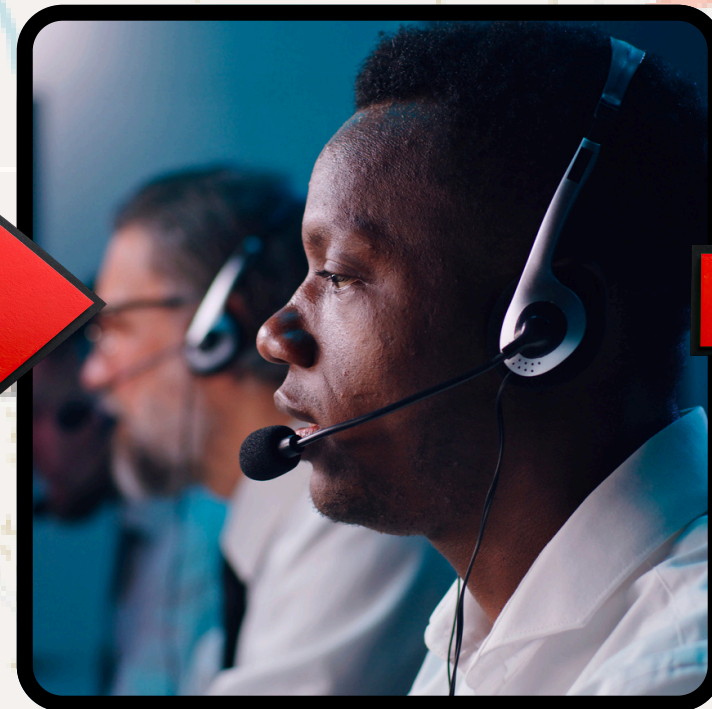

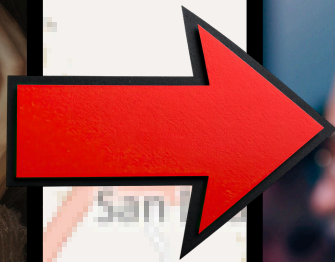

Sentinel CAD

Stingray

Role-Based Workflow

SENTINEL CAD operates through a **role-based workflow** that connects **Call Takers, Dispatchers, Lead Responders, and Administrators** into one streamlined process.

Each role performs specific responsibilities while sharing real-time information through a **centralized system**. This coordinated approach ensures accurate data capture, faster response times, effective field operations, and reliable post-incident analysis.

Sentinel CAD

Stingray

Key Features

Smart Dispatching

Efficient responder assignment using **location-based sorting**, availability filtering, and expertise matching. A visual dispatch map and live status updates allow real-time operational oversight.

Response Execution

Empowers responders through a mobile application that supports **live case maps**, **real-time status updates**, **field notes**, and attachment uploads for comprehensive incident documentation.

Sentinel CAD

Stingray

Key Features

Monitoring and Feedback

Case board monitoring for **tracking incident progress**, completion of detailed incident report forms, and generation of response time reports.

Why Use SENTINEL CAD?

**Seamless
Role
Coordination**

**Faster and
More Efficient
Emergency
Response**

**Improved
Situational
Awareness**

**Scalable and
Secured
Platform**

**Accurate and
Standardized
Reporting**

**Data-Driven
Decision
Making**
